

SEKURIT SERVICE REMOTE SERVICE

WHAT'S IN THE BOX?

SEKURIT SERVICE REMOTE DEVICE (SSRD)

In order to enable the service a dongle is required.

ETHERNET CABLE

With this cable the SSRD is connected to the internet.

USB STICK

Is needed as a one off set up for connection to WIFI and Hotspot. First the USB stick needs to be set up via the webshop.

OBD CABLE

This cable needs to connect the device to the car to carry out the remote calibration service.

All calibration at hand

- 95% coverage of car park

YOUR BUSINESS MATTERS

sekurit-service.com

A Saint-Gobain brand

CALIBRATE EVERY VEHICLE? NOW YOU CAN

UNDERSTANDING YOUR CALIBRATION CHALLENGES

At Sekurit Service we understand there are currently 2 main issues that you face when it comes to ADAS.

1. There's usually a delay between the introduction of a new model to the market and the availability in the aftermarket diagnostic tools. Meaning a vehicle owner is forced to visit the official dealer for their calibration needs, no matter how far they have to drive.
2. The increasing number of models equipped with secure gateway or systems that do not allow you to operate on the car.

These 2 issues can result in a loss of potential turnover combined with a potential decrease of customer satisfaction.

OFFERING YOU A UNIQUE CALIBRATION SOLUTION

At Sekurit Service we offer you our unique remote calibration service. Enabling you to run diagnostics and calibrate the ADAS-systems on even the most recent car models. Our remote

diagnostics interface Sekurit Service Remote Device (SSRD) allows you to connect to our highly secure network, giving our expert operators access to the vehicle you're working on. Using the latest OEM tools, they'll perform the calibration for you according to the manufacturer's exact standards.

WHAT DOES OUR REMOTE CALIBRATION SERVICE COVER CONCRETELY?

- A full scan of your vehicle
- Static calibration
- Dynamic calibration (Your cell phone as internet hotspot)
- All car manufacturer protocols, even DoIP for Jaguar Land Rover
- Secure gateways* are no longer blocked!
- Reset of rain & light sensor
- City brake/lidar reset

*Secure gateway: car manufacturer protocol that requires a car manufacturer authorization in order to access the ECUs of the car. Note: 95% coverage of car park.

HOW DOES IT WORK?

THE SEKURIT SERVICE REMOTE CALIBRATION PROCEDURE IS AS USER-FRIENDLY AS IT IS EFFICIENT.

- To start, you'll need our Sekurit Service Remote Device (SSRD), along with an active internet connection which allows the interface to securely communicate with our technicians.
- Next, log into your account on the Sekurit Service webshop and purchase a ticket for the remote calibration service.
- Your request will be processed as quickly as possible by our expert operators.
- Through the SSRD interface connected to the vehicle on your end, our calibration experts will use the correct official OEM Tools to perform the necessary calibration remotely.
- In your own language our expert operators will chat with you through the Sekurit Service webshop, just as he would do if he was standing by you, guiding you through the steps that you have to perform for an accurate camera calibration. For static calibration, in addition to the SSRD, your calibration set-up and corresponding calibration target will remain necessary.
- Once the camera calibration is successfully finished, you will receive the Sekurit Service Report with all the details required as proof of a successfully completed job.

OUR OFFER

We cover 95% of your car park and always up to date OEM tools. The latest cars are available from day 1!

REMOTE ACCESS

Through the SSRD interface connected to the vehicle on your end, our calibration experts will use the correct official OEM tools to perform the necessary calibration remotely.

REPORT PROOF

Once the camera calibration is successfully finished, you will receive the Sekurit Service Report as proof of a successfully completed job.
